Toll-Free: 1-866-713-TICK
TickCheck LLC - Tick Testing Order Form

TickCheck uses qPCR-based DNA testing to determine whether a tick carries the bacteria that cause Lyme disease and over a dozen additional tick-borne diseases (such as anaplasma, babesia, bartonella, ehrlichia, tularemia, Borrelia miyamotoi, STARI, and rickettsia). By testing the tick that bit you, you can determine your risk of exposure to these diseases.

Mail this form, payment, and specimen to: What can we test?

TickCheck Tick Testing
ATTN: LABORATORY SPECIMEN
562 Independence Road
East Stroudsburg, PA 18301

We test any species of tick including deer ticks, dog ticks, and lone star ticks. We can test ticks of any life stage, alive or dead. After removing the tick, place it in a sealed bag or plastic pill bottle and mail it with this form to our laboratory.

We can test multiple ticks of the same species (up to 5) removed from the same host at the same time. Please note that when multiple ticks are tested together, results are for the combined sample. Therefore, for any positive result(s), we would not know which tick it came from. If you want separate results for each tick, please place multiple orders using multiple copies of this form.

- Number of ticks in this order: ____
- Tick location (if different from address): _____

Choose One Testing Panel:

<input type="checkbox"/>	Basic Panel	Test for the top 4-6 pathogens most relevant to your tick species.	\$49.99
